ABSTRACT OF THE DISCLOSURE

An information communication terminal apparatus which is capable of performing search processing or preset processing

5   for received services within a short period of time. There is provided an identifier which specifies an attribute of a service to be included for the search processing or the preset processing. A table in which the attributes of the received services are registered is searched through based

10   on the identifier. The search processing or the preset processing is performed only for those services that match with the identifier.
